

Introducing DataTrak™

On-board vehicle data recorder

LifeGuard DataTrak is a sophisticated on-board data recorder that records vehicle and seat belt status data per NFPA requirements.

DataTrak software generates standard or customized reports to help fire officials monitor vehicle operation and improve driver behavior.

In the event of an accident, DataTrak can log information from multiple systems within the vehicle, including the deployments of LifeGuard RollTek® and 4Front™ when installed, to assist in accident reconstruction.

LifeGuard Technologies

DataTrak is a product of LifeGuard Technologies®, a division of IMMI® – the leading provider of advanced safety systems for fire apparatus. LifeGuard engineers work alongside the most trusted fire apparatus manufacturers, delivering advanced occupant protection products that are proven to meet the needs of firefighters. LifeGuard Technologies fire products include side roll protection, frontal occupant protection and hands-free SCBA holders.

DataTrak System

- Securely stores up to six weeks of data
- Records RollTek and 4Front deployments
- Mounting options allow easy access to data port and battery box
- Meets NFPA 1901 and is SAE J1939 compliant
- Supports OBDII CAN (ISO 15765-4) protocols in vehicles built after 2008

Seat Belt Display

- Visual and audible reminders promote seat belt usage
- Available with panel or surface mount installations
- Includes seating and buckling sequence indicator

Software

- Generates customized or standard reports
- Data viewable in daily, weekly or monthly increments
